Notes:
FLD TRN: In brigade with FSB
CBT TRN: In battalion near rear
MAINT: In battalion near rear
In BSA: BDE HHC
FSB
FLD TRN

Assumptions:
* No effort has been made to show the support elements (maint, supply, medic, and mess) that would accompany the tank co when it joined the mech TF and the rifle company that departed, because the total number of vehicles and personnel would be the same for all practical purposes.

* The ARTY battalion CP has arbitrarily been placed in the TF area as a representative of brigade assets that would be located in the TF area. The number of units could be larger or smaller depending on terrair and mission.

Notes:
FLD TRN: In brigade with FSB
CBT TRN: In battalion near rear
MAINT: In battalion near rear
In BSA: BDE HHC
FSB
FLD TRN

Assumptions:

* No effort has been made to show the support elements (maint, supply, medic, and mess) that would accompany the tank co when it joined the mech TF and the rifle company that departed, because the total number of vehicles and personnel would be the same for all practical purposes. This will simplify the changes to the JANUS database.

* The ARTY battalion CP has been arbitrarily placed in the TF area as a representative of brigade assets that would be located in the TF area. The number of units could be larger or smaller depending on terrain and mission.

APPENDIX L

METEOROLOGICAL DATA EVALUATION

This page is intentionally blank.

This appendix provides the set of meteorological data evaluated for use in AMedP-8 Biological, as described in Section IV.A of this document. It also provides the results of the meteorological data evaluation conducted to select conditions for use in AMedP-8 calculations.

The data presented in Table L-1 is that originally provided by STI Corporation as separate text files. Each column contains data collected at a single location over a single 24-hour period. The column labels are in the format LMMDD, where L is the location, MM is the month the data was collected, and DD is the initial day the data was collected. Possible values for L are A (Ankara, Turkey), I (Tel Aviv, Israel), O (Osan, South Korea), R (Riyadh, Saudi Arabia) or T (Trappani, Italy). Since data collection at all locations began at 1800 Zulu time, the 24-hour collection period overlapped two calendar days.

Tables L-2 through L-21 present the results of the calculations performed to select the "worst case" conditions for dissemination of each agent. The even-numbered tables provide the casualty values calculated for all meteorological data sets and delivery systems for a single agent. The odd-numbered tables provide the ranking of each meteorological data set by delivery system, with the data set selected for use highlighted.

Table L-1. Meteorological Data Evaluated for Use in AMedP-8 (1)

06366L200, modified	Field Arty BN HHB
06367L200	Field Arty Battery 1

Notes: CO TN: In company rear area; CBT TN: In battalion rear area.

1. Assumptions

No effort has been made to show the support elements (maint, supply, medic, and mess) that would accompany the tank company when it joined the mech TF and the rifle company that departed, because the total numbers of vehicles and personnel would be the same for all practical purposes.

The artillery battalion CP has been arbitrarily placed in the TF area as representative of brigade assets that would be located in the TF area. The number of icons could be larger or smaller, depending on terrain and mission.

MEMORANDUM FOR THE RECORD

FROM: Julia Burr

SUBJECT: Amphibious Assault Force Troop Array Documentation Issues

While working on the documentation of AMedP-8 Volume 2: Biological, Lusine discovered some inconsistencies between the amphibious assault force troop array used in that volume and the source material apparently used to create it. I've looked at both the source material and the troop array and can account for all the inconsistencies and explain most of them.

This scenario is based on a document generated by an unknown IDA consultant, most likely a retired general officer working in SED. I do not have a copy of this document, so we can't cross check my observations against it.

In 1996, Jeff Grotte developed a spreadsheet, *naval forces.xls*, which is the primary source of the actual data contained in the troop array, *aaf.trp*. This same spreadsheet was the basis for the schematic drawing of the amphibious assault force provided in AMedP-8 and shown in Figure N-1 below.

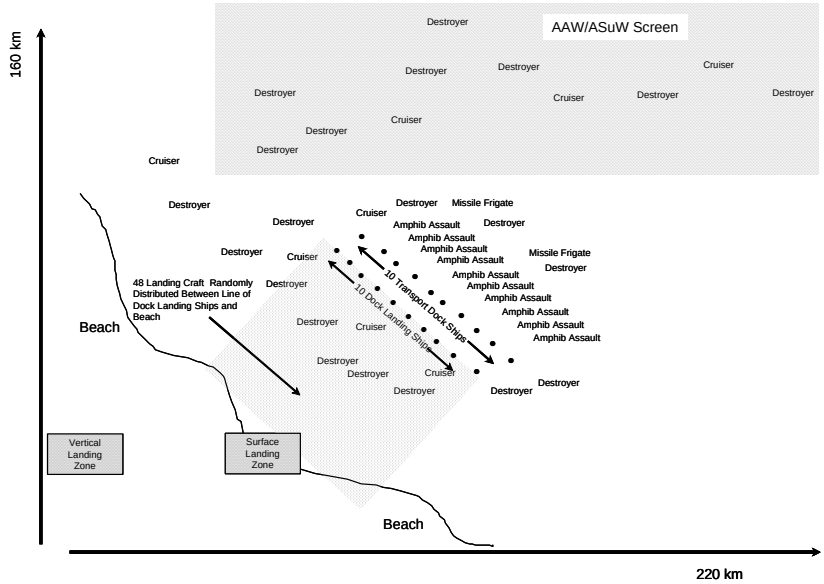

Figure N-1. Amphibious Assault Force

There are two primary discrepancies between the data in the *naval forces.xls* file and the *aaf.trp* file: the *naval forces.xls* file, and the drawing above, contains more ships and a much greater number of troops than contained in the *aaf.trp* file. These discrepancies are illustrated in Figure N-2 below.

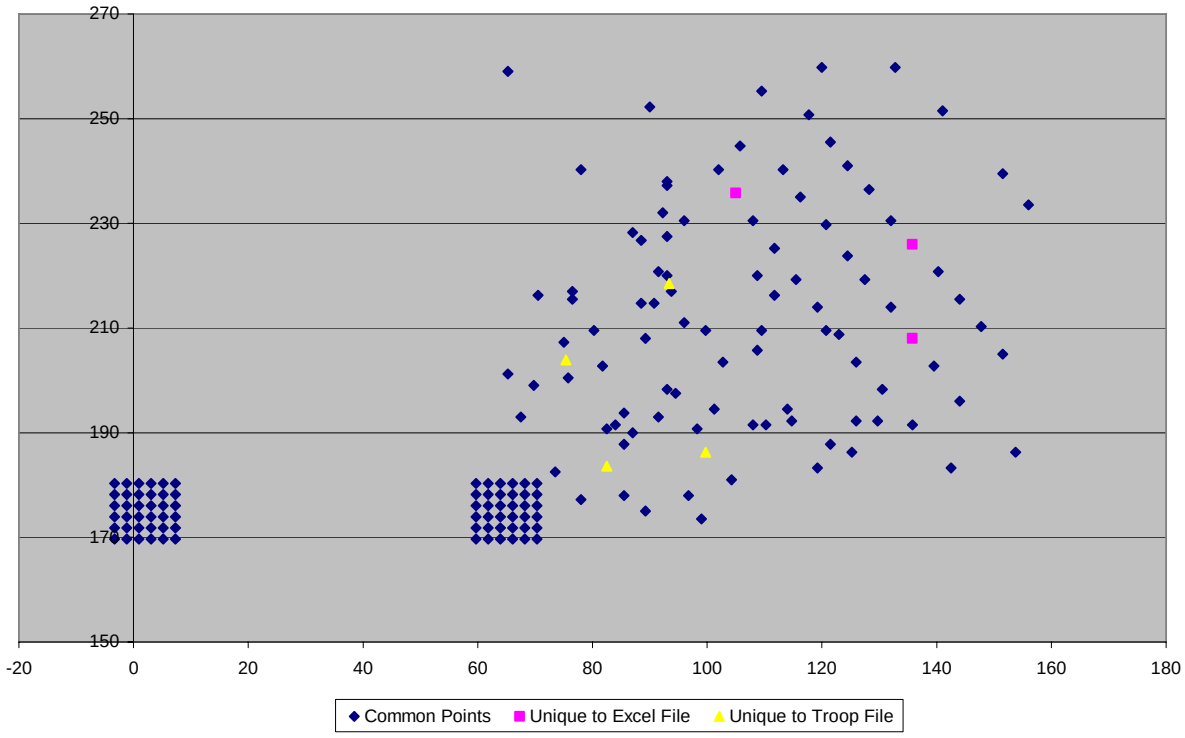

Figure N-2. Amphibious Assault Force Troop Array Test

The *naval forces.xls* file divides the scenario forces into several categories: the AAW/ASW screen (3856 troops), amphibious forces (55,712 troops), a CV battle group (25,274 troops), and two amphibious assault landing zones (10,100 troops). The *aaf.trp* file (50,830) includes only the amphibious forces and the amphibious assault landing zone troops. Although it is pictured in the schematic contained in the document, the AAW/ASW screen is not included in the troop file.

Even when the same categories of forces are considered, the *naval forces.xls* file contains 65,812 troops and the *aaf.trp* file contains only 50,830, a difference of 14,982. This difference has four separate causes:

1. The *naval forces.xls* spreadsheet adds two amphibious landing zones—as I recall these were not described in the initial scenario document. However, the spreadsheet simply adds a landing zone population; it does not alter the ship population to account for it. The *aaf.trp* file does, however, by subtracting 389

individuals from each LHD and LHA ship and 367 individuals from each LSD, LPD4, and LPD17 ship. The affected ship population is reduced 10,107 in the *aaf.trp* file.

2. In the *naval forces.xls* file, each surface landing zone grid point contains 183.333 troops, and each vertical landing zone grid point contains 97.222 troops, for a total of 10,100. In the *aaf.trp* file, the number of troops at each grid point has been rounded to an even number (183 and 97, respectively), for a total of 10,080 troops. Rounding therefore reduces the *aaf.trp* file by 20 troops.
3. The *naval forces.xls* file contains three ships—one LHD, one LPD4, and one LSD—that are not present in the *aaf.trp* file. This further reduces the *aaf.trp* file by 4,971 troops.
4. The *aaf.trp* file contains 4 LCAC ships, each with 29 troops, not present in the *naval forces.xls* file. This adds 116 troops to the *aaf.trp* file.

I believe the decision to reduce the ship populations to account for the landing zone populations makes sense, although I can't explain why the reduced ship population is 27 troops larger than those contained in the landing zones. Given that the *aaf.trp* file contains 27 affected troops, one fewer troop per ship should have been subtracted.

I do not know why the troop ships were excluded or the LCACs added; the grid points do not overlap and there are obvious holes in the ship line. Were we to redo this troop array, I would add the troop ships back in and delete the LCACs. We would then also have to add the appropriate troop population from these ships into the landing zone populations.

This page is intentionally blank.

APPENDIX O

GLOSSARY

This page is intentionally blank.

Attack location: the location where the weapon is first released, characterized by geographic coordinates (x,y).

Casualty: an individual whose performance is degraded to less than or equal to 25% of original capability and, as a consequence, must enter the medical system.

Convalescent: an individual who was a casualty but has recovered to at least 75% of original capability, and, as a result, leaves the medical system.

Covert attack: an attack that cannot be observed by human means; such an attack may be observed by technical means (i.e., via detectors).

Disease progression profiles: maps of symptom severity over the time that describe how a disease progresses over time.

Dose: the mass of agent received (via inhalation or percutaneous route) by an individual, expressed in mg. Dose can be correlated to performance profile through the use of DICE algorithms.

Dosage: for the purposes of this paper, used interchangeably with exposure; see "exposure."

Exposure: time-integrated environmental concentration to which an individual is subjected.

Gridpoint number (also called grid position number): in a troop array, BioStrike assigns numbers to each occupied coordinate, known as gridpoint numbers; thus, troops located in a particular position on the coordinate system can be identified by both a gridpoint number and geographic coordinates (x,y).

Human sources of exposure: infected persons who introduce and spread contagious disease.

Icon: in a troop array, an individual or group of individuals collocated at a single geographic coordinate are considered an icon and assigned an icon number.

Knowledge Acquisition Management Instrument (KAMI): an expert polling tool used to evaluate clinical and laboratory experience with humans and research animal models.

On-target attack: an attack that occurs at a location within the boundaries of the targeted unit.

Off-target attack: an attack that occurs at a location outside the boundaries of the targeted unit.

Optimal attack location: the attack location that would result in the greatest number of alive but incapacitated individuals during the immediate aftermath of the attack.

Out-of-area operation: an operation located outside of the defined area of responsibility of NATO; the area of responsibility for NATO is typically within the borders of NATO countries. An out-of-area operation usually implies an explicit invitation and a decision by the NATO council for individual countries to participate.

Overt attack: an attack that is observable by human means, due to a visible signature (i.e., blast or thud).

Performance: the capability of individuals to carry out general combat tasks at various times after exposure to biological agent.

Return to Duty (RTD): an individual who was a casualty but has recovered to at least 75% of original capability, and, as a result, leaves the medical system and reports back to duty.

Signs and Symptoms (S/Ss): a set of number of a graphical representation that stands for the intensity of signs and symptoms and delineates the severity of symptoms.

Sign/Symptom severity profile: the manifestation of the dose on various physiological systems.

Surface roughness length: The surface roughness length (m) characterizes the degree to which the surface elements (e.g., trees, bushes, grass, sand particles, buildings, ridges) influence the wind and temperature profiles and turbulence within the PBL. Surface roughness lengths are typically 1/10th the average height of the surface elements.

Unprotected status: Lacking individual physical or medical protection.

Unsheltered status: Located in the open; lacking collective protection.

Worst-case meteorological conditions: conditions under which agent dissemination has the greatest potential for causing illness.

REPORT DOCUMENTATION PAGE		Form Approved OMB No. 0704-0188

Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing this collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to Department of Defense, Washington Headquarters Services, Directorate for Information Operations and Reports (0704-0188), 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. **PLEASE DO NOT RETURN YOUR FORM TO THE ABOVE ADDRESS.**

1. REPORT DATE (DD-MM-YY)	2. REPORT TYPE	3. DATES COVERED (From – To)
June 2006	Final	

4. TITLE AND SUBTITLE

Documentation of Production: Allied Medical Publication 8(B), Volume II, Medical Planning Guide of NBC Battle Casualties (Biological)

5a. CONTRACT NO.

DASW01-04-C-0003/W74V8H-05-C-0042

5b. GRANT NO.

5c. PROGRAM ELEMENT NO(S).

6. AUTHOR(S)

Carl Curling, Julia L. Burr, Lusine Danakian, Deena S. Disraelly, Katy Korzekwa, Contributor: John Bombardt, Jr.

5d. PROJECT NO.

5e. TASK NO.

CA-6-2281

5f. WORK UNIT NO.

7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES)

Institute for Defense Analyses
4850 Mark Center Drive
Alexandria, VA 22311-1882

8. PERFORMING ORGANIZATION REPORT NO.

IDA Paper P-4123

9. SPONSORING / MONITORING AGENCY NAME(S) AND ADDRESS(ES)

Office of the Surgeon General
DASG-HCF
5111 Leesburg Pike, Suite 401A
Falls Church, VA 22041-3258

Joint Staff, J-4
4000 Joint Staff
Washington, DC 20318

10. SPONSOR'S / MONITOR'S ACRONYM(S)

DASG-HCF/JS, J-4

11. SPONSOR'S / MONITOR'S REPORT NO(S).

12. DISTRIBUTION / AVAILABILITY STATEMENT

Approved for public release; distribution is unlimited.

13. SUPPLEMENTARY NOTES

14. ABSTRACT

This paper captures the technical underpinnings (including algorithms, assumptions, and data) of Allied Medical Publication 8(B), *Medical Planning Guide of NBC Battle Casualties, Biological* (AMedP-8 Biological). It provides users of AMedP-8 Biological an understanding of the methodology used to obtain the casualty estimates therein, as well as the underlying assumptions and limitations of those estimates. This paper supplements AMedP-8 Biological with information such as: the detailed layout and composition of the brigade-sized units and tactical scenarios they comprise; the doctrinal basis for tactical scenarios; tables of estimates of exposures received by individuals in each scenario; assumptions and calculation for the process used to optimize attack locations and select agent, munitions and delivery system characteristics to estimate exposures. This paper also presents summary tables, which provide an overview of casualties and fatalities for each of the scenarios modeled, enabling quick overview and comparison between scenarios.

During the development of AMedP-8, exposure data was subsequently analyzed with the DICE/IDP methodology or the KAMI-based methodology (depending on agent); however, the performance estimate data was not available for documentation and the methodologies developed by Veridian PSR have been previously documented.

15. SUBJECT TERMS

biological warfare, human response, modeling, performance, casualties, NATO, tactical scenario, biological weapon, biological agent, KAMI, AMedP-8, casualty estimation, medical model, anthrax, smallpox, plague, botulinum toxin, Venezuelan Equine Encephalitis, tularemia, Q Fever, Staphylococcal enterotoxin B, influenza, glanders, NBC-CREST.
